

# TRANSFORMING THE EXPERIENCE-BASED BRAIN (TEB)

*An Integrative Neurodevelopmental Approach to the treatment of Developmental Trauma with Transforming Touch® Approach*

**The most critical and sensitive time for our brain's development is from conception to the first years of life.** The brain organizes in stages – from the bottom up – at an incredible rate. Each developmental stage relies on the previous stage going well.

Early childhood trauma and stress disrupt this orderly development process – affecting our psychobiology on multiple levels. The effects do not end when our childhood does. They can profoundly disrupt our adult lives – making it difficult to grow, learn, interact and love.

**TEB presents a multilevel model for healing developmental trauma in adults and children** synthesizing somatic touch, regulation, primitive reflex integration, attachment styles, the bio-physiology of trauma, and the trauma narrative. **You will learn to:**

- Transform High-Tone Dorsal to healthy autonomic response (Polyvagal)
- Acquire Transforming Touch skills that encourage regulation for healing.
- Evaluate and Integrate Primitive Reflexes using Transforming Touch skills.
- Integrate the healing language of Developmental Trauma in your work.
- Help clients transform their trauma narrative and change their trauma story

## Chicago, Illinois

**4 Modules:** January 25-28, 2019, April 12-15, 2019, August 2-5, 2019 and November 1-4, 2019
